Art Unit: 2633

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 17, 20-21 are rejected under 35 U.S.C. 102(e) as being anticipated by McGhan et al (6842587).

McGhan et al teach a laser module, which has a means for controlling a temperature of the laser module through direct bilateral communication with the laser module (15), wavelength control means (16) and means to control a modulation module (18). In regard to claim 20, he teaches a first signal (signal from laser module to element 16) and provide a first control signal (from 16 to 15), a second signal (signal from laser module to element 15) and generate a second control signal (from 15 to the laser module) wherein the laser module transmits light based on the second control signal from the temperature controller. In regard to claim 21, he teaches a laser current circuit (laser bias current) which generates a third signal (between "laser bias current" and the laser module. In regard to claim 19, see claim 20 of McGhan et al in which he teaches that the SOA is controlled in order to control the output power of the modulator.

3. Claims 1, 3-4, 6-15 are allowed.

4. Applicant's arguments with respect to claims 17 and 19-21 have been considered but are moot in view of the new ground(s) of rejection. McGhan et al teach that the

temperature control receives a signal and provides a signal directly to the laser module.

This appears to be bi-lateral since it operates in a manner similar to the applicant's.

The applicant's arguments with respect to claims 1, 3-4, 7-10 are persuasive.
